

Surviving Cancer in Asia

Information, Technology, and Society in Asia
ITASIA 128
Network for Education and Research on Asia
ASNET 4971280

What are the needs for Universal Health Coverage for cancer in Asia and how should it be provided?

If you or a person close to you were to receive a cancer diagnosis, what social systems and mechanisms do you think are necessary to support and complement cancer treatment?

Universal Health Coverage is a concept that aims to ensure that all people obtain the health services they need without suffering financial hardship.

The future of Asia is your future. Why not bring your own knowledge and ideas to a course that enables people from all disciplines to come together and share views on surviving cancer in Asia?

Hideyuki Akaza (Professor, The University of Tokyo)
